3.5ton Low Floor Traffic Management Vehicle

Key features

- Low floor height
- 3 bed length options
- 1,380kg payload
- Rear or side ramp loading
- Telescopic or fully removable fall arrest barriers
- Optional solid rear bulkhead for LP13 directional arrow
- Ability to tailor vehicle to specific applications
- 4,500kg variant available

The Low Floor Traffic Management Vehicle has been designed to overcome the challenges faced by the Traffic Management fleet operator.

The vehicle not only offers a safer environment for operatives to work off reducing potential injury when loading and unloading, but also improves enormously on efficiency and whole life costs when compared against a traditional vehicle fitted with a tail lift.

With up to double the carrying capacity of a conventional 3.5 ton traffic management vehicle, the LCVT vehicle can fulfil a dual role maximising its utilisation.

Based around a proven commercial low floor chassis conversion which allows the vehicle to be totally flexible either when being used for lane closure work or the delivery to site of temporary traffic light systems.

** LCVT Ltd reserve the right to change the specification without prior notice. The weight shown is based on; no driver, or spare wheel being carried.*
