GROUNDS MAINTENANCE

# BEAVERTAIL

The grounds maintenance beavertail body, developed by LCVT, has been designed to offer a viable alternative to the need to trailer commercial mowers and equipment to site and the cost and inconvenience that creates.

The vehicle is available with a wide range of options to allow the vehicle to be tailored to the end-user's specific usage.

## Carry capacity is key to the vehicle's success

With the body being built predominantly in aluminium and a unique extruded perforated plank use for the vehicle floor which not only offers a non-slip surface when loading machinery but also allows water to drain off the body easily and quickly.

The tailgate also benefits from being manufactured with an aluminium frame and uses a GRP textured mesh which is both extremely durable and non-slip in all weather conditions.

## OPTIONS AVAILABLE

- Fall arrest straps/barriers
- LED lightbar
- Removable mesh sides
- LED strobes front and rear
- Storage locker
- Reversing camera
- Chapter 8 vinyl's
- Wider tailgate

The beavertail body can be fitted to all mainstream chassis cabs and offers (dependant on base vehicle & options) a payload of up to 1,350kg.

The vehicle can be supplied with individual ramps or what is the more favoured option, a tailgate which is 1,700mm wide, although wider options are available.
