# Innovational Beavertail Bodies

# The Ultima

## Key features

- Proven commercial chassis conversion
- Exceptionally strong
- Light weight
- Unique aluminium bed
- Solid deck option
- Full range of options available

The Ultima re-writes the rule book on 3.5 ton car transporters. The vehicle benefits from a specifically designed and engineered chassis, which uses a high grade steel, laser cut, to give both an exceptionally strong and light weight end product.

The interface with the donor cab has been designed to be both sleeved and bolted resulting in a connection which transfers and dissipates the load through a much larger area than alternative chassis conversions. The vehicle can be supplied with either O.E. rear suspension for ease of maintenance, or air suspension.

The aluminium bed is also unique to the Ultima. It is both lightweight whilst providing an extremely high level of grip that will not deteriorate over the life of the vehicle.

*\* LCVT Ltd reserve the right to change the Ultima specification without prior notice. The weight shown is based on; no driver, or spare wheel being carried.*
